## THYROTROPIN ALFA (Thyrogen) INFUSION (v. 05/24/2024)

Medications:  Thyrotropin alia 0.9 mg M every 24 hours x 2 doses  Nursing communications:  Please remind patient to adhere to low-iodine diet for a total of 2 weeks until scan  Discontinue therapy plan when treatment complete  Emergency Medications:  DiphenhydrAMINE (BENADRYI) 25 to 50 mg IV as needed for mild to moderate drug reactions (flushing, dizziness, headaches, diaphoresis, fever, palpitations, chest discomfort, blood pressure changes (>/= 20 points in SBP), nausea, urticaria, chills, pruritle). Administer 2 mg IV once, if reaction does not resolve in 3 minutes may repeat 25 mg IV dose for a total of 50 mg and contact provider.  MethylPREDNISolone sodium succinate (Solu-MEDROI) 125 mg IV once as needed for shortness of breath, continued symptoms of mild to moderate drug reaction (flushing, dizziness, headaches, diaphoresis, fever, palpitations, chest discomfort, blood pressure changes (>/= 20 points in SBP), nausea, urticaria, chills, pruritle) that worsen or persist 5 minutes after administration of diphenhydramine (Benadry). Contact provider if given.  Ephephrine 0.3 mg IM once for anaphylaxis. If reaction does not resolve in 3 minutes may repeat 0.3 mg IM dose for a total of 0.6 mg Avoid use of hand, tood, teg venus me elderty patient and those with occlusive vascular disease. Contact provider if given.  Famotidine (PEPCID) 20 mg IV once as needed for infusion/allergic reaction.  Pramotidine (PEPCID) 20 mg IV once as needed for infusion/allergic reaction.	Diagnosis/Indica	tion (ICD-10):
Nursing communications:    Please remind patient to adhere to low-iodine diet for a total of 2 weeks until scan   Discontinue therapy plan when treatment complete    Emergency Medications:   DiphenhydrAMINE (BENADRYL) 25 to 50 mg IV as needed for mild to moderate drug reactions (flushing, dizziness, headaches, diaphoresis, fever, palpitations, chest discomfort, blood pressure changes (>/= 20 points in SBP), nausea, urticaria, chills, pruritic). Administer 2 mg IV once, if reaction does not resolve in 3 minutes may repeat 25 mg IV dose for a total of 50 mg and contact provider.    MethylPREDNSolone sodium succinate (Solu-MEDROL) 125 mg IV once as needed for shortness of breath, continued symptoms of mild to moderate drug reaction (flushing, dizziness, headaches, diaphoresis, fever, palpitations, chest discomfort, blood pressure changes (>/= 20 points in SBP), nausea, urticaria, chills, pruritic) that worsen or persist 5 minutes after administration of diphemydramine (Benadryl). Contact provider if given.    Epinephrine 0.3 mg IM once for anaphylaxis. if reaction does not resolve in 3 minutes may repeat 0.3 mg IM dose for a total of 0.6 mg Avoid use of hand, toot, leg veins in eiderly patient and those with occlusive vascular disease. Contact provider if given.    Famoitdine (PEPCID) 20 mg IV once as needed for infusion/ allergic reaction.    May give emergency medications IM if IV route unavailable	Medications:
