*Third generation cephalosporins and piperacillin/tazobactam are unreliable for systemic infections with AmpC-producing organisms (E. cloacae, K. aerogenes or C. freundii), regardless of susceptibility data, due to the development of induced resistance on treatment.

Haemophilus influenzae beta-lactamase positive: 16.7% (n=42)

Note: It is recommended that organisms susceptibility data only be reported when there are at least 30 clinical isolates from which to obtain data. In some instances, it may be prudent to include a lesser number of clinical isolates as determined by the Medical Director.

This antibiogram was created in compliance with CLSI M39-Ed5 Analysis and Presentation of Cumulative Antimicrobial Susceptibility Test Data; Approved Guideline, 5th edition January 2022.
